Rescheduled: NE Bucklin Hill Road night work and road closure

July 16, 2021

In 2019 PSE announced plans to rebuild the aging Winslow Tap transmission line. The transmission line was built in the 1960s and its equipment is nearing the end of its useful life and needs to be replaced. Project fieldwork conducted in 2020 revealed that some of the existing poles and equipment need to be replaced sooner than we had anticipated.

The replacement of these identified poles and equipment was originally planned for late June but was postponed due to the excessive heat. PSE has rescheduled this work to begin the evening of August 6. Additionally, to complete work safely, we will also be closing a section of NE Bucklin Hill Road between NE Eagle Harbor DR and Blakely AVE NE during the same time. Please see below for project details.

Night work and road closure details

- Who:** Multiple line construction crews from PSE and Potelco
What: Replace identified transmission poles and equipment
When: August 6 and August 9 through 13
- Nightly from 7:30 p.m. to 5:00 a.m.
- Where:** Winslow Tap transmission line corridor along NE Bucklin Hill Road
(refer to map on reverse)

What you can expect

- Work will not occur over the weekend.
- Our crews will attempt to do the loudest work earlier in the evening to minimize impacts.
- Emergency vehicles and neighbors directly along the route will have the ability to travel in and out of the road closure area.
- Signs and traffic control flaggers will be on site.
- **As part of this work, you may experience a planned power outage overnight. If an outage at your property is required, you'll be informed of the outage details in advance via door hanger.**

We understand the inconvenience of construction work and power outages and aim to complete our work with as little disruption as possible. If you have questions or concerns, please contact me and reference **Winslow Tap pole replacements**.
